High Availability & Data Protection for Your Windows Servers

Double-Take Software

Sure, you back up your data. But how frequently? How much data would you lose in a disaster? How long would you be without access to critical applications and data?

Double-Take, when combined with the Double-Take Server Recovery Option, provides a single solution to continuously protect and recover an entire server, including the OS, applications and data. Using the Double-Take Server Recovery Option, multiple servers can be replicated to a single image server and recovered on-demand to new hardware after a disaster.
With Double-Take, you get:

Continuous, full-server protection

There's more to protecting your systems than just protecting the data. Double-Take is the world's most relied-upon solution for affordable data protection, disaster recovery and centralized backup. Full-server protection uses Double-Take replication to protect the OS, applications and data for easy recovery.

Continuous, asynchronous, byte-level replication over any distance.

Double-Take monitors changes to all protected files and replicates only the bytes that change. Replicate to a disaster recovery site as far away as you would like, over standard IP networks, for maximum protection against data loss. Improve performance by compressing protected data before it is sent.

Protection for MS Exchange, SQL Server, Virtual Systems, SharePoint, and more.

Bulletproof your business continuity, data migration, centralized backup, and server consolidation operations.

THE DATANATIONAL ADVANTAGE

As a Double-Take Business Partner, we will work closely with you to design, deliver, test, implement and support a solution that meets your specific requirements. We're your one-stop shop for innovative business solutions. Datanational is positioned to help you meet today's growing business demands and those of the future. Contact us for product information and pricing.
